# Requirements Traceability Matrix (RTM)

## Document Information

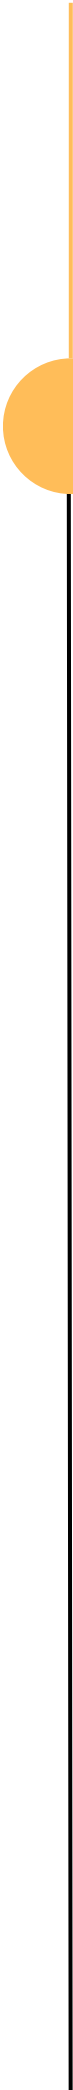

| Field         | Value                            |
|---------------|----------------------------------|
| Project Name  |                                  |
| Document Name | Requirements Traceability Matrix |
| Version       | 1                                |
| Author        |                                  |
| Date          |                                  |
| Status        | Draft / Approved                 |

## Revision History

| Version | Date | Author | Changes       |
|---------|------|--------|---------------|
| 1       |      |        | Initial Draft |

Traceability Matrix

|                        |                             |                            |                        |
|------------------------|-----------------------------|----------------------------|------------------------|
| Req ID                 | BR-001                      | BR-003                     | BR-004                 |
| Business Requirement   | User should log in securely | User can book appointments | Admin can manage users |
| User Story             | US-001                      | US-003                     | US-004                 |
| Functional Requirement | FR-001                      | FR-003                     | FR-004                 |
| Design Reference       | Login Screen                | Booking Screen             | User Management        |
| API/Component          | Auth API                    | Appointment API            | User API               |
| Test Case ID           | TC-001                      | TC-003                     | TC-004                 |
| UAT Scenario           | UAT-001                     | UAT-003                    | UAT-004                |
| Priority               | High                        | High                       | Medium                 |
| Status                 | Completed                   | Completed                  | Planned                |
| Owner                  | Dev Team                    | Backend Team               | Admin Team             |
| Remarks                |                             |                            |                        |

## Requirement Status

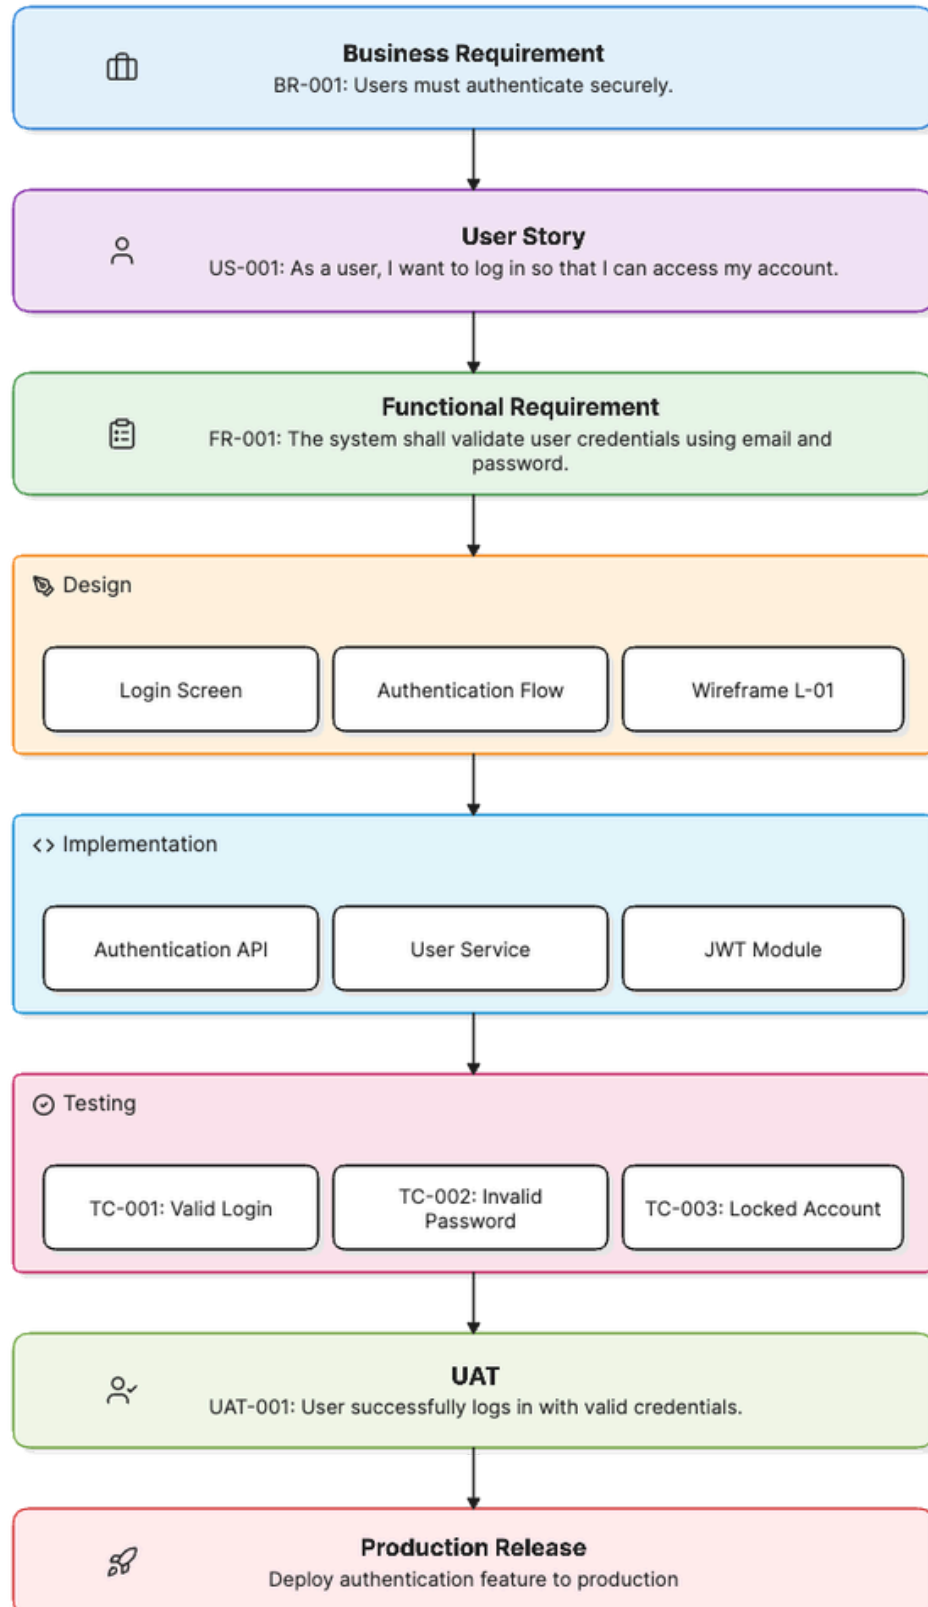

| Status         | Meaning                 |
|----------------|-------------------------|
| Draft          | Requirement created     |
| Approved       | Stakeholders approved   |
| In Development | Development started     |
| Developed      | Feature completed       |
| Testing        | Under QA                |
| UAT            | User acceptance testing |
| Completed      | Released                |
| Rejected       | Requirement removed     |

## Requirement Coverage Summary

| Category                | Total | Completed | Pending |
|-------------------------|-------|-----------|---------|
| Business Requirements   |       |           |         |
| Functional Requirements |       |           |         |
| Test Cases              |       |           |         |
| UAT Scenarios           |       |           |         |

# Requirement Mapping

## Requirements Traceability Example

## Change Log

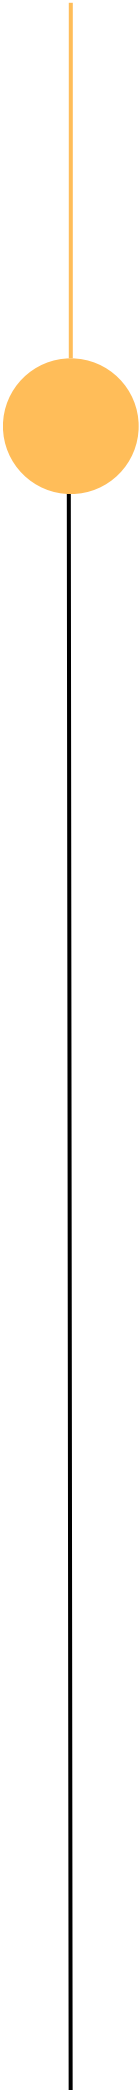

| Change ID | Requirement | Description                  | Date | Approved By |
|-----------|-------------|------------------------------|------|-------------|
| CHG-001   | BR-003      | Added online payment option  |      |             |
| CHG-002   | BR-004      | Added role-based permissions |      |             |

## Risk Tracking

| Requirement         | Risk             | Impact | Mitigation      |
|---------------------|------------------|--------|-----------------|
| Appointment Booking | Double booking   | High   | Slot validation |
| Payment             | Gateway downtime | High   | Retry mechanism |
| Reports             | Large datasets   | Medium | Pagination      |

## Sign-Off

| Role             | Name | Signature | Date |
|------------------|------|-----------|------|
| Client           |      |           |      |
| Product Owner    |      |           |      |
| Business Analyst |      |           |      |
| Technical Lead   |      |           |      |
| QA Lead          |      |           |      |

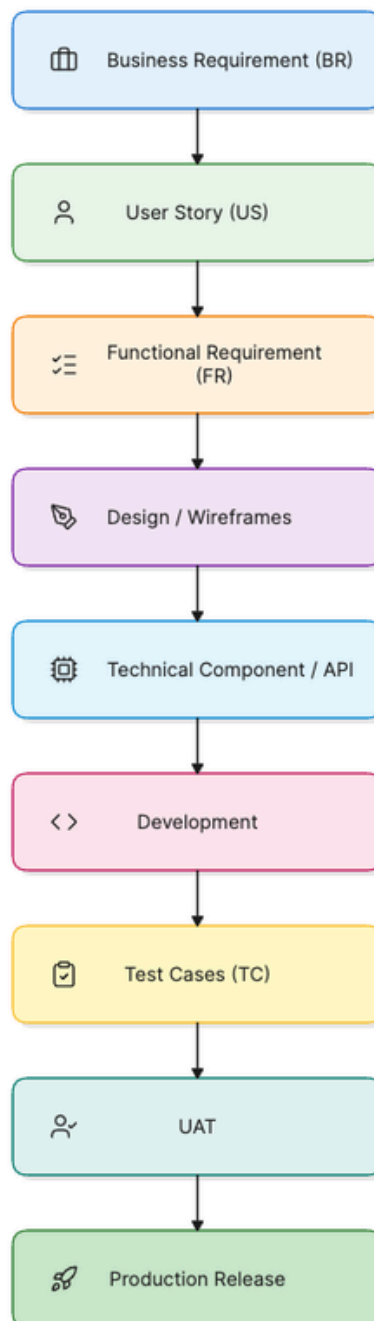

## RTM Example

|                   |                                            |                        |                    |
|-------------------|--------------------------------------------|------------------------|--------------------|
| <b>BR ID</b>      | BR-001                                     | BR-003                 | BR-004             |
| <b>User Story</b> | US-001                                     | US-003                 | US-004             |
| <b>FR ID</b>      | FR-001                                     | FR-003                 | FR-004             |
| <b>API</b>        | POST /login &<br>POST /forgot-<br>password | POST<br>/appointments  | GET /users         |
| <b>Screen</b>     | Login/forgot<br>password                   | Appointment<br>Booking | User<br>Management |
| <b>Test Case</b>  | TC-001                                     | TC-003                 | TC-004             |
| <b>UAT</b>        | UAT-001                                    | UAT-003                | UAT-004            |
| <b>Status</b>     | Completed                                  | Testing                | Planned            |

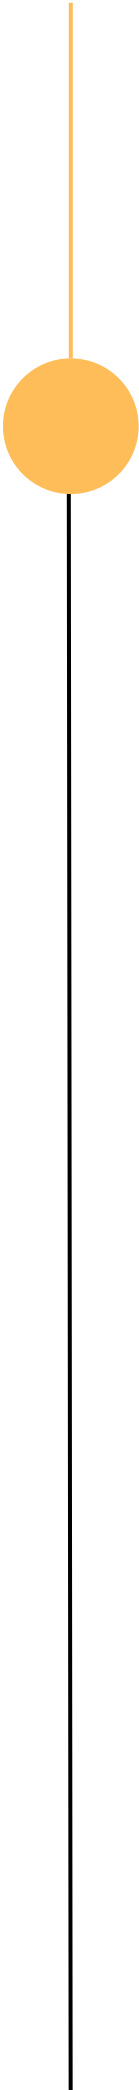

## Best Practices

- Assign a unique ID to every requirement (e.g., BR-001, FR-001, US-001).
- Maintain one-to-one or one-to-many mappings between business requirements, user stories, functional requirements, design artifacts, code components, and test cases.
- Update the RTM whenever requirements change to keep traceability accurate.
- Use status and owner fields to track implementation progress.
- Review the RTM before release to ensure every approved requirement has been implemented and tested.

## Typical Traceability Flow
